

Photovoltaic cell and module

Overview

Photovoltaic (PV) devices contain semiconducting materials that convert sunlight into electrical energy. A single PV device is known as a cell, and these cells are connected together in chains to form larger units known as modules or panels. Research into cell and module design allows PV. Conducting research on PV cell and module design aims to deliver technologies that drive down the costs of solar electricity by improving PV efficiency and lowering. SETO's research and development projects for PV cell and module technologies aim to improve efficiency and reliability, lower.
